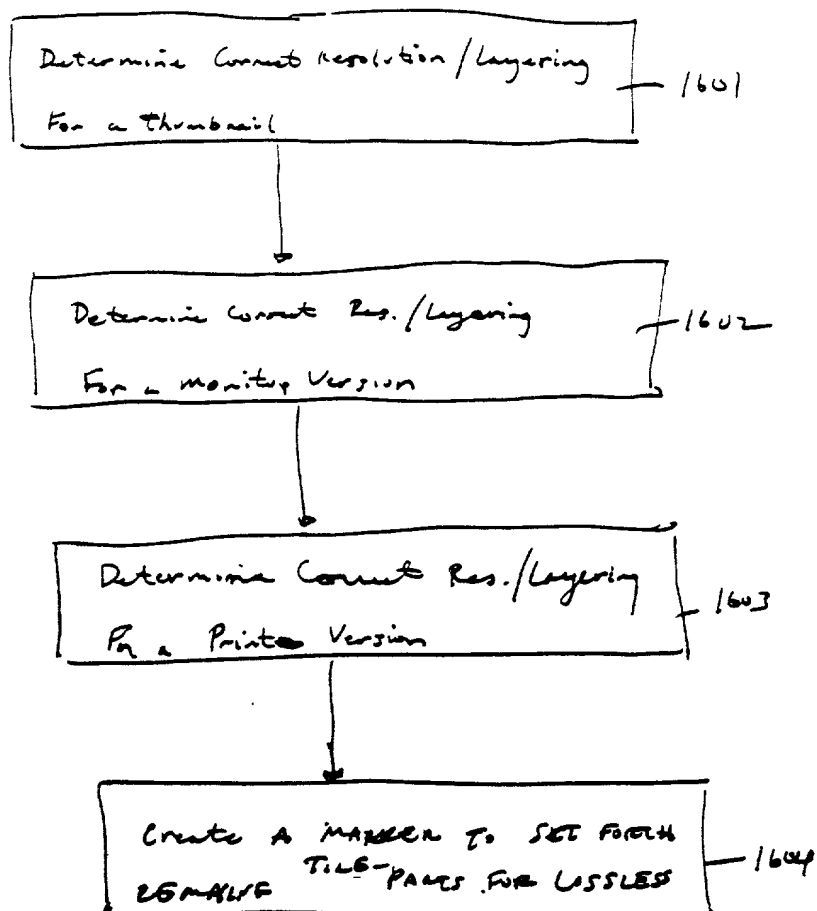

Fig 16

Figure 1 displays six diagrams (A-F) illustrating the evolution of a 2D lattice (with a 2x2 top-left corner) under a specific algorithm, showing the state after one step for different values of α (0.5, 0.6, 0.7, 0.8, 0.9). The diagrams show the spread of '1' values from the top-left corner into the rest of the lattice, with the spread being more extensive for higher α values.

Diagram A (lossless) shows the initial state where only the top-left corner (2x2) is '1'.

Diagram B ($\alpha = 0.5$) shows the state after one step. The bottom-right cell (2x2) is now '1'.

Diagram C ($\alpha = 0.6$) shows the state after one step. The bottom-right cell (2x2) is now '1'.

Diagram D ($\alpha = 0.7$) shows the state after one step. The bottom-right cell (2x2) is now '1'.

Diagram E ($\alpha = 0.8$) shows the state after one step. The bottom-right cell (2x2) is now '2'.

Diagram F ($\alpha = 0.9$) shows the state after one step. The bottom-right cell (2x2) is now '2'.

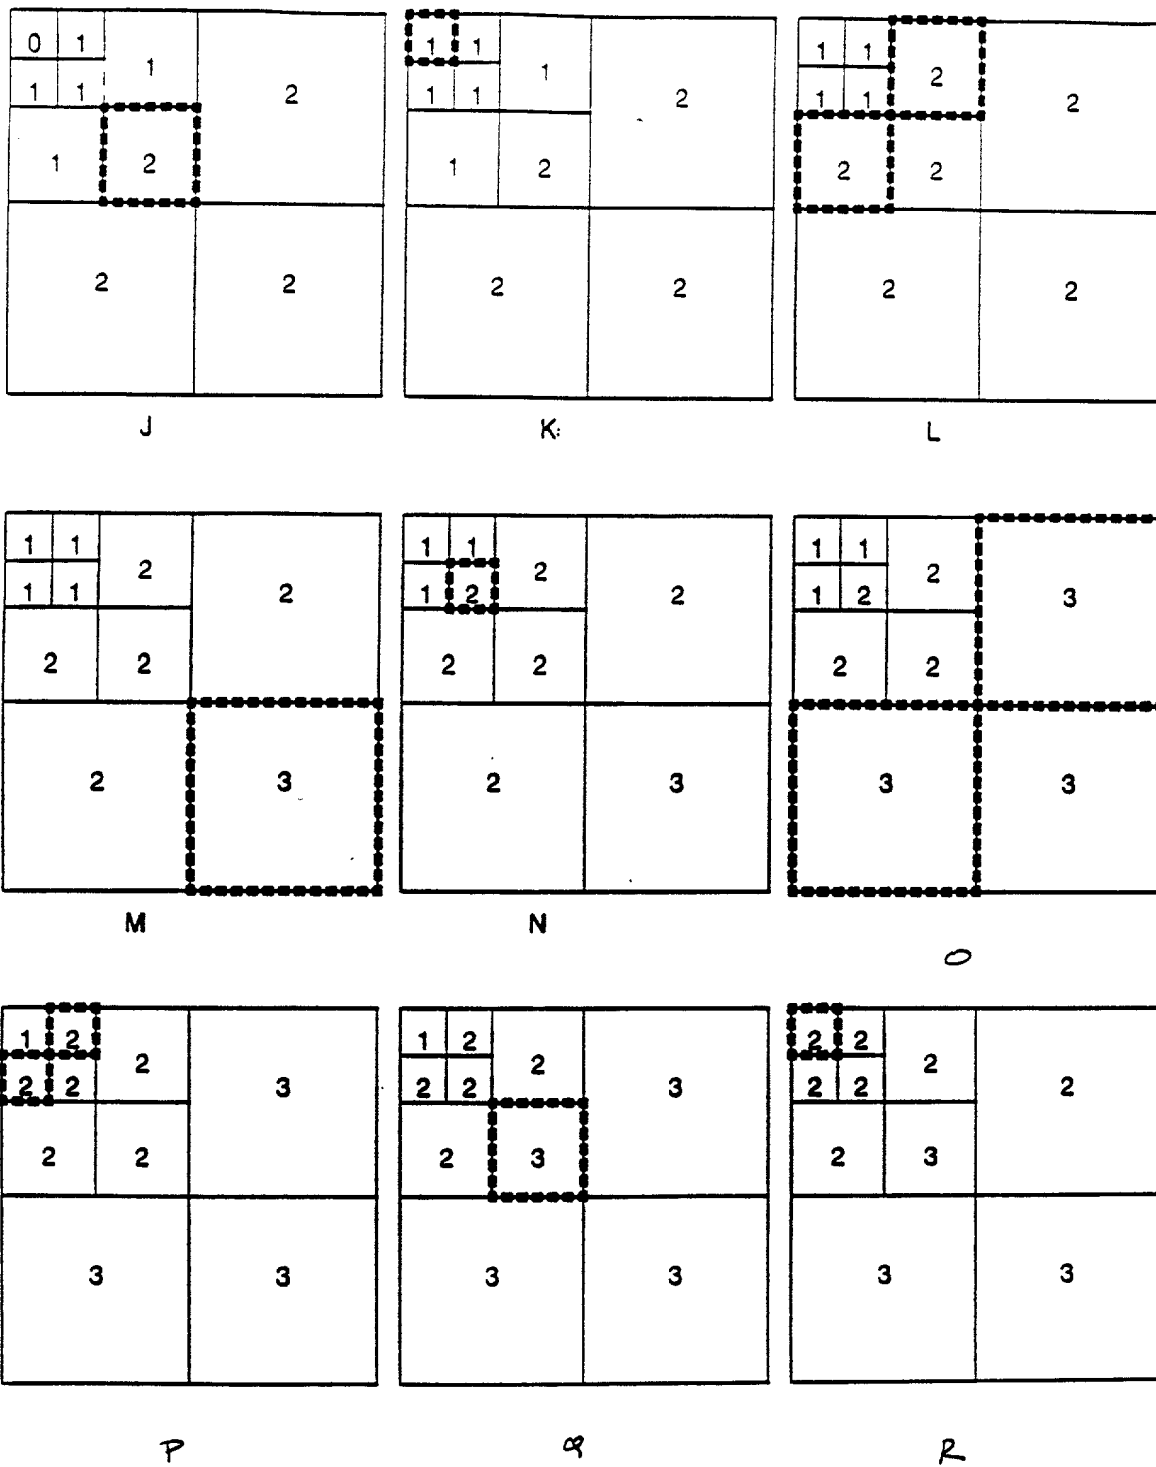

Figure 18

Figure 1 shows three diagrams illustrating the hierarchical structure of the luminance and chrominance channels. The luminance channel is a 4x4 grid with values 0, 0, 0, 2, 0, 1, 2, 3. The chrominance channels are 4x4 grids with values 0, 2, 2, 2, 2, 3, 4, 4. The chrominance channels are labeled 'all' and 'all'.
